Marine Vehicle Path Following Using Inner-Outer Loop ...

Abstract: This paper addresses the problem of marine vehicle path following using inner-outer loop control, with due account for the vehicle dynamics We propose an inner-outer control structure that lends itself to a simple intuitive interpretation and exhibits three key advantages: i) it allows for decoupling in the design of the inner and

METRIC PROPERTIES OF OUTER SPACE - arXiv

METRIC PROPERTIES OF OUTER SPACE 4 When we will need to be precise we will refer to a metric graph as an element of the unprojectivised CV_n , and to its class as an element of CV_n Given any marked graph A , we can look at the universal cover TA which is an R-tree on which $\pi_1(R_n)$ acts by isometries, via the marking τ_A (From

Return to home Small Labyrinths you can make at home undefined my inner paths are wider than the outer ones But since the paths are colored, walking the narrow outer paths is very easy I really like this pattern for a small space, because the inner circuits are long and straight enough that you aren't tripping over your feet
